

FULLY AUTOMATED PRECISION CONTROL WITH THE M SYSTEM

The Uni-Blinds SL20-22M and SL27M system is a significant improvement on previous electrical systems used for raising/lowering and tilting blinds integrated within a 20, 22 and 27mm cavity double-glazed unit.

The improvements result in quicker installation procedures and a safer and smoother operation within the hermetically sealed unit.

The motorised venetian or pleated blind has an internal motor integrated within the blind head-rail and incorporates a micro-control unit plus encoder, which allows simultaneous, synchronized movement of groups of blinds.

Morley Glass has developed a unique control box for motorised blinds which eliminates installation issues and provides an aesthetically pleasing solution for control at your fingertips. All pre-wired and tested making it a faster, hassle free installation.

Manufactured from high quality materials, coupled with the purity of aesthetic appearance and technical excellence, the system is particularly suited to prestigious projects, especially the exclusive contemporary domestic market. And now exclusively supplied in 15 working days when ordered on a Friday.

CONTROL AT YOUR FINGERTIPS

For the discerning homeowner who prefers the speed and synchronicity of an automated home, Uni-Blinds can be connected to mains or battery operated motors for easy operation at the flick of a switch or by remote control.
